Note: Some products in this catalog are manufactured with ozone depleting substances and are referenced with this warning:

WARNING

Manufactured with CFC-113, a substance which harms public health and environment by destroying ozone in the upper atmosphere.

Ozone Depleting Substances

The final rule for identification of product manufactured with or containing ozone depleting substances (CFCs/HCFCs) such as freon, carbon tetrachloride, etc., was issued by the Environmental Protection Agency in February of 1993. The rule requires that the consumer should be aware when the purchase decision is made that the product contains or was manufactured with an ozone depleting substance.

For several years, Abbott Laboratories has been actively developing processes that would not require the use of these agents. Our objective is to eliminate manufacturing our products using ozone depleting substances by the end of 1993. We are well on our way to accomplishing this goal. Some of the changes made or in progress include modifying our sterilization processes, our cleaning processes for incoming materials and working with our own suppliers to gain their commitment to eliminate the use of these substances in their manufacturing processes.

Noted within the pages of this catalog are items which currently* are manufactured using ozone depleting substances. These items are designated by a + symbol following the list number. They will be steadily reduced in number throughout the year as we eliminate the use of ozone depleting substances in our manufacturing processes.

All returns accepted for credit must be in condition for restocking (unless otherwise stated), in full, unopened, undamaged, original Abbott shipping cases, EXCEPT products which have two or more inner packages within the shipper carton.
